Introduction. As part of the series of posts announced at this initial blog post (.NET Application Architecture Guidance) that explores each of the architecture areas currently covered by our team, this current blog post focuses on "Microservices and Docker containers: Architecture, Patterns and Development guidance". Just as a reminder, the four introductory blog posts of this series will ...

Event-driven architecture (EDA), is a software architecture pattern promoting the production, detection, consumption of, and reaction to events.. An event can be defined as "a significant change in state". For example, when a consumer purchases a car, the car's state changes from "for sale" to "sold". A car dealer's system architecture may treat this state change as an event whose occurrence ...

Representational State Transfer (REST) is an architectural style that defines a set of constraints to be used for creating web services. Web Services that conform to the REST architectural style, or RESTful web

services, provide interoperability between computer systems on the Internet. REST-compliant web services allow the requesting systems to access and manipulate textual representations of ...

In our third E-book, author Doug Rosenberg (Founder and President of ICONIX Software Engineering, Inc) presents a practical approach to modeling Service-Oriented Architecture solutions from concept to code.. Using an illustrated example, the reader is guided through the 'hands-on' ICONIX Process Roadmap for Service-Oriented Architecture. Each step of the roadmap is brought to life using ...
