In mathematical analysis, the Haar measure assigns an "invariant volume" to subsets of locally compact topological groups, consequently defining an integral for functions on those groups.. This measure was introduced by Alfr d Haar in 1933, though its special case for Lie groups had been introduced by Adolf Hurwitz in 1897 under the name "invariant integral".

In mathematics, the integral of a non-negative function of a single variable can be regarded, in the simplest case, as the area between the graph of that function and the x-axis.The Lebesgue integral extends the integral to a larger class of functions. It also extends the domains on which these functions can be defined.. Long before the advent of the 20th century, mathematicians already ...
