All materials should be thoroughly mixed, for (2-3) minutes, before adding the glass fibres. After mixing glass fibre, for 1 minute, the cubes are casted.

### **Glass Fibre Reinforced Concrete Use in Construction**

The study described is a part of a large-scale experimental and theoretical programme on the application of fibre reinforced plastic (frp) reinforcement for concrete structures initiated at the Université de Sherbrooke (Sherbrooke, Canada). The programme is being carried out to gain an insight into the flexural behaviour of concrete beams reinforced with glass fibre reinforced plastic (gfrp ...

### **Glass fibre reinforced plastic (GFRP) rebars for concrete**

Concrete, usually Portland cement concrete, is a composite material composed of fine and coarse aggregate bonded together with a fluid cement (cement paste) that hardens over time—most frequently a lime-based cement binder, such as Portland cement, but sometimes with other hydraulic cements, such as a calcium aluminate cement. It is distinguished from other, non-cementitious types of concrete ...

Rebar (short for reinforcing bar), collectively known as reinforcing steel and reinforcement steel, is a steel bar or mesh of steel wires used as a tension device in reinforced concrete and reinforced masonry structures to strengthen and aid the concrete under tension. Concrete is strong under compression, but has weak tensile strength. Rebar significantly increases the tensile strength of the ...

1. Introduction. Lightweight concrete (LWC) is a versatile material that has created a great interest and large industrial demand in recent years in a wide range of construction projects, despite its known use dated back to 2000 years. LWC is a concrete, which by one means or another has been made lighter than conventional (normal weight aggregate) concrete (El Zareef, 2010, Babu, 2008).

Cellulose macro- and nanofibers have gained increasing attention due to the high strength and stiffness, biodegradability and renewability, and their production and application in development of composites. Application of cellulose nanofibers for the development of composites is a relatively new research area. Cellulose macro- and nanofibers can be used as reinforcement in composite materials ...
