the cube. Each method is used to solve a standard 3x3 Rubik's cube to determine which algorithm would take the least number of moves within the least period of time. To understand the algorithms, the Rubik's cube is notated based on side, turns and cube rotation, to allow for simplified equations.

The first two layers (F2L) of the Rubik's Cube are solved simultaneously rather than individually, reducing the solve time considerably. In the second step of the Fridrich method we solve the four white corner pieces and the middle layer edges attached to them.

PLL Algorithms Page Solving the PLL is the last step of the CFOP, and is the final straight in speedsolving

the Rubik's cube. There are 21 different variations of Last Layer Permutations, and a well-known name for each.

Rubik's cube is a widely popular mechanical puzzle that requires a series of movement sequences, or algorithms, in order to be solved. Many of you have likely watched the tutorial videos that teach you how to solve the cube, but don't know or cannot remember those long, boring algorithms.

Rubik's Cube solution with advanced Fridrich (CFOP) method. The first speedcubing World championship was held in 1982 in Budapest and it was won by Minh Thai (USA) with a 22.95 seconds solution time. Since then the methods have evolved and we are capable of reaching solution times below 6 seconds.

Optimal solutions for Rubik's Cube refer to solutions that are the shortest. There are two common ways to measure the length of a solution. The first is to count the number of quarter turns. The second is to count the number of outer-layer twists, called "face turns".
